

**Predisposizione di un file PDF protetto da password generato
da un documento di Word**

Creazione del documento;

Salvare il file in formato PDF;

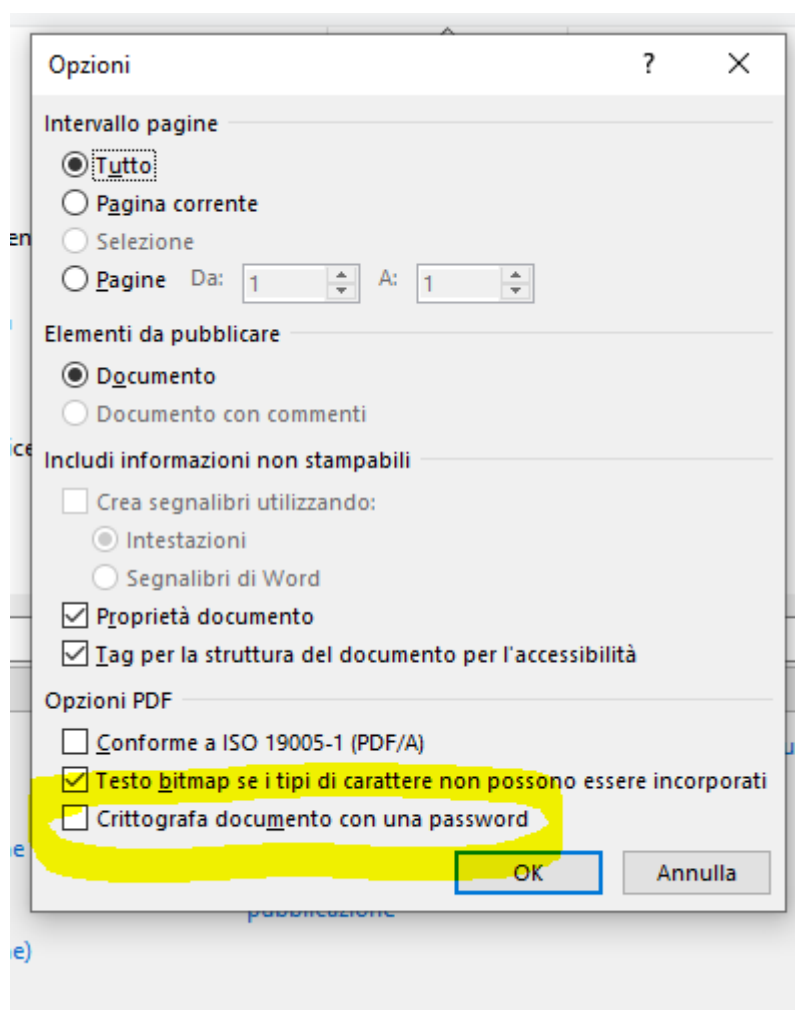

The screenshot shows the Microsoft Word interface with the 'Salva con nome' (Save As) dialog box open. The dialog box is titled 'Salva con nome' and shows the current location as 'Questo PC > Disco locale (C:) > Utenti > Gbodano > Documenti'. The file list shows various document formats, with 'PDF (*.pdf)' selected. The 'Nome file:' field is empty, and the 'Salva come:' dropdown is set to 'PDF (*.pdf)'. The 'Autori:' field is 'Gianfranco Bodano', and the 'Tag:' is 'Aggiungi tag'. The 'Titolo:' is 'Aggiungi titolo'. The 'Ottimizza per:' section has 'Standard (pubblicazione online e stampa)' selected. The 'Apri file dopo la pubblicazione' checkbox is checked. The 'Salva' button is highlighted.

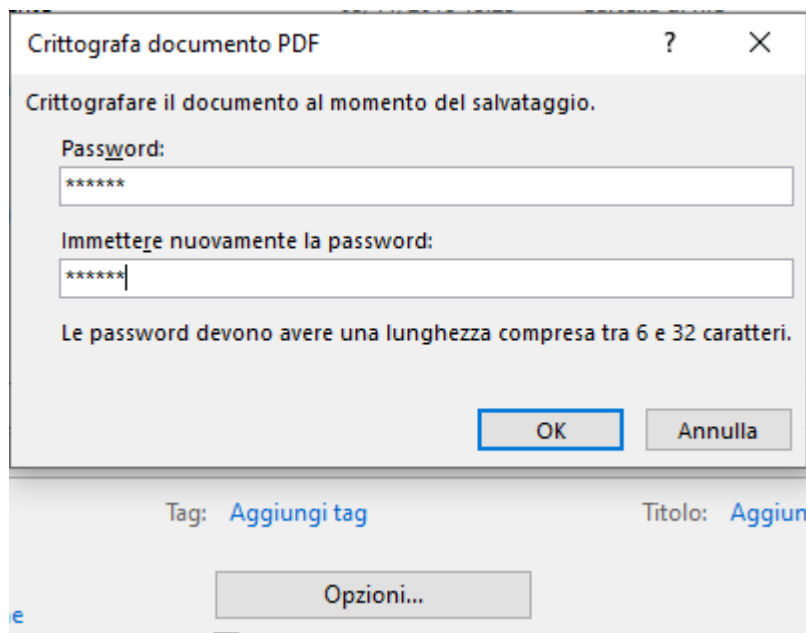

Selezionare "Opzioni";

Selezionare "Crittografa documento con una password";

Inserire la password e confermare con "OK"

The image shows a dialog box titled "Crittografa documento PDF" with a question mark and a close button. The main text reads "Crittografare il documento al momento del salvataggio." Below this, there are two input fields: "Password:" containing "*****" and "Immettere nuovamente la password:" containing "*****". A note states "Le password devono avere una lunghezza compresa tra 6 e 32 caratteri." At the bottom right are "OK" and "Annulla" buttons. Below the dialog box, there are labels for "Tag: Aggiungi tag" and "Titolo: Aggiun" with an "Opzioni..." button below them.

All'apertura del file PDF verrà richiesta la password inserita precedentemente attraverso la procedura sopra indicata.;
